

V-LIGHT Extensions Service Agreement Contract

Service Agreement

This Service Agreement ("Agreement") is entered into between Clearwaters Salon Med Spa ("Salon") and the undersigned client ("Client"), collectively referred to as the "Parties," regarding the application and care of V-Light Hair Extensions.

Service Description:

The Salon agrees to provide the Client with V-Light hair extension services, utilizing UV LED technology to cure resin, securing the extensions on a strand-by-strand basis.

Understanding UV LED Technology and Liability Waiver: The Client acknowledges that the V-Light hair extension application process utilizes UV LED technology, specifically UVB light. This technology is gentle, operating within a wavelength range of 290 to 320nm, primarily affecting the skin's surface (epidermis) without deep penetration or causing harm. The Salon ensures that exposure time (approximately 8 seconds per application) is well below the threshold that could cause skin damage or increase the risk of cancer. The Client understands these facts and agrees not to hold the Salon liable for any claims related to the use of UV LED technology.

Initial Shedding Expectation:

The Client is informed and acknowledges that it is normal and expected for approximately 30 to 40 percent of the extensions to shed within the first three days following the application. This initial shedding phase is part of the extension settling process.

Bond Curing Time and Care Instructions:

The Salon advises the Client that the bonds take 48 hours to cure fully after application. During this time, it is imperative to keep the bonds dry to ensure proper curing. Failure to do so may result in compromised bond integrity.

Comprehensive Client Care Instructions:

- *Swimming:* Avoid swimming in chlorine or salt water to prevent damage. Use a swim cap if swimming cannot be avoided and rinse extensions with clean water afterward.
- *Brushing:* Use a soft bristle or boar bristle brush, starting from the ends and working your way up to the roots to prevent pulling and breakage.
- *Heat Styling:* Minimize the use of heat styling tools at the base. Use a heat protectant and the lowest heat setting possible.
- *Gentle Washing:* Use a sulfate-free shampoo and conditioner. Avoid products containing alcohol at the base.
- *Product Use:* Avoid oils, serums, and leave-in conditioners at the base of the extensions.

Additional Care Instructions:

- *Exercise and Sweating:* Excessive sweating can lead to excess or premature shedding. Take precautions during high-temperature activities.
- *Sensitivity to Resin:* A patch test is recommended for clients with adhesive allergies. The resin is safe but may cause sensitivity in some individuals.
- *Heat Tool Usage:* Do not exceed a temperature of 120° Fahrenheit with heat tools near the extensions.
- *Avoid Picking or Touching Bonds:* Picking or touching the bonds may result in premature bond shedding. Handle extensions gently to maintain bond integrity.

Liability Waiver:

The Client agrees that the Salon is not liable for any damage resulting from non-adherence to care instructions or from causes beyond the Salon's control.

Agreement to Terms:

By signing below, the Client acknowledges that they have read, understood, and agreed to all terms and conditions outlined in this Agreement, including care instructions intended to preserve the integrity and appearance of the V-Light extensions.
